Office of the Superintendent of Schools
MONTGOMERY COUNTY PUBLIC SCHOOLS
Rockville, Maryland
August 26, 2008

## MEMORANDUM

To: Members of the Board of Education
From:

Subject: SAT Participation and Performance of the MCPS Class of 2008

The SAT combined scores for the Montgomery County Public Schools (MCPS) Class of 2008 (1616) continue to be statistically significantly higher than the mean SAT combined scores for Maryland (1498) and the nation (1511), but are lower than scores for the MCPS Class of 2007. On average, MCPS outperformed all test takers in Maryland and the nation-including private school students-by 118 and 105 points, respectively (Table A1). The MCPS Class of 2008 mean score on each SAT subtest was at least 30 points higher than the subtest scores for Maryland and the nation (Figure 1). In math, the MCPS mean SAT score of 549 was 47 points higher than the Maryland mean score of 502.

Figure 1. Mean SAT critical reading, math, and writing scores for the Classes of 2008 in MCPS, Maryland, and the nation.

The high performance levels on the SAT are impressive since almost three fourths $(7,274)$ of the MCPS Class of 2008 took the SAT. MCPS SAT participation rates were higher than the rates for Maryland (68\%) and the nation (45\%), but lower than our participation rate in 2007. At the same time, MCPS saw a marked increase in ACT participation this year (a 620-student increase in participation). As has been the case for years, MCPS, Maryland, and the nation continue to see that a disproportionate number of SAT test takers are Asian American and White rather than African American or Hispanic; a trend that we are determined to correct. As Montgomery County has continued to grow more diverse, we continue to encourage increased participation
among students of all backgrounds because we believe it's the right thing to do. However, until all students have the same level of preparation going into the exam, scores may decline. That is what we experienced this year.

In counties with less diversity such as Howard County, where White students account for 59 percent of the student body, and Fairfax County, where White students make up 48 percent of the class, scores improved. It is important to note that White students in MCPS continue to outscore White peers in both counties by significant margins.

SAT scores for MCPS students of all races/ethnicities were higher than the scores of their counterparts in Maryland and the nation, but the racial/ethnic gaps in SAT performance observed in Maryland and the nation also were observed in MCPS. Asian American students’ scores actually increased in 2008 by 14 points to 1720, and White students scores rose 4 points to 1740 . There was a difference of more than 360 points in the MCPS mean SAT combined scores of Asian American and White students compared with African American (1336) and Hispanic (1401) students. The mean SAT combined scores of students in the MCPS Class of 2008 who received Free and Reduced-price Meals System (FARMS), special education, and limited English proficiency (LEP) services were more than 300 points lower than the MCPS average. This SAT achievement gap remains troublesome and continues to be an area where we must focus our reform efforts.

Although SAT mean scores for the MCPS Class of 2008 exceeded those for Maryland and the nation, they were lower than for the MCPS Classes of 2006 and 2007 (Attachment). One reason for this may be changes in test-taking patterns that have resulted from an increase in ACT participation. Between 2006 and 2008, the percentage of graduates who took the ACT increased by 8.3 percentage points to nearly one fourth of all graduates. Both participation and performance on the ACT have increased steadily over the last five years. At the same time, there was a decrease in SAT retesting among MCPS graduates of 5.5 percentage points between 2006 ( 65.5 percent) and 2008 ( 60.0 percent).

Table 1
Number and Percentage of SAT Test Takers in the MCPS Classes of 2006 to 2008 Who Took an SAT Retest by Race/Ethnicity

| Took SAT Retest | Took SAT Retest |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
|  | Race/Ethnicity |  | 2006 | 2007 | 2008 | 2006 | 2007 |
|  | 4709 | 4866 | 4363 | 65.5 | 63.5 | 60.0 |
| African Am. | 724 | 855 | 766 | 58.4 | 58.8 | 53.4 |
| Asian Am. | 1044 | 1060 | 956 | 76.4 | 78.0 | 73.9 |
| Hispanic | 345 | 408 | 390 | 49.9 | 48.7 | 44.9 |
| White | 2593 | 2535 | 2237 | 66.8 | 63.5 | 61.2 |

The College Board reports that, on average, students who retake the SAT increase their combined critical reading, mathematics, and writing score by approximately 40 points. The cumulative effect of the change in retesting, perhaps due to greater ACT participation, may contribute to the decline in MCPS SAT mean scores.

Although SAT mean scores have declined over the past three years, the percentage of students who attained an SAT combined score of 1650 or higher and/or an ACT composite score of 24 or higher (the score that corresponds to an SAT-combined score of 1650) held steady for students of all races/ethnicities (Table 2). Between 2006 and 2008, the percentages of SAT test takers whose scores met the MCPS strategic plan goal for students to attain an SAT combined score of 1650 or higher decreased by 2.8 percentage points, but the percentage of ACT test takers who earned composite scores of 24 or higher increased by 5.7 percentage points. MCPS students in the Class of 2008 attained high scores on the SAT and/or ACT at the same rates as in prior years; however, the change in student testing patterns may have had a negative impact on the district SAT mean score.

Table 2
Number and Percentage of MCPS Graduates in the Classes of 2006 to 2008 With ACT Composite Score of 24 or Higher and/or SAT Combined Scores of 1650 or Higher by Race/Ethnicity

| Race/Ethnicity | $\%$ACT Composite Score24 or Higher |  |  | \% SAT Combined Score 1650 or Higher |  |  | \% <br> ACT Composite Score 24 or Higher and/or SAT Combined Score 1650 or Higher |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  |  |  |  |  |  |  |
|  | 2006 | 2007 | 2008 | 2006 | 2007 | 2008 | 2006 | 2007 | 2008 |
| All | 48.7 | 48.4 | 54.4 | 50.2 | 48.6 | 47.4 | 50.4 | 49.4 | 48.8 |
| African Am. | 13.3 | 15.8 | 16.9 | 15.6 | 16.4 | 15.4 | 16.0 | 16.6 | 16.1 |
| Asian Am. | 57.1 | 66.0 | 71.2 | 59.1 | 56.8 | 58.0 | 59.1 | 57.8 | 59.1 |
| Hispanic | 27.2 | 32.5 | 31.8 | 24.2 | 21.0 | 20.4 | 23.8 | 21.2 | 21.3 |
| White | 59.1 | 57.9 | 63.6 | 62.8 | 63.3 | 62.6 | 63.3 | 64.5 | 64.4 |

Note. An ACT composite score of 24 corresponds in percentile rank to an SAT combined score of 1650.

The MCPS Office of Shared Accountability (OSA) is conducting analyses that will be used to inform efforts to improve SAT scores for all students. One early finding confirms the strong correlation of high school mathematics coursework and course marks with SAT math performance. Over the past three years, about three fourths of MCPS SAT takers who completed Algebra 2 or above and maintained a GPA of 2.5 or better in their high school mathematics courses earned SAT mean math scores of 550 or higher. However, there is an increase in the number of students who have not attained these academic benchmarks who take SAT. The increased SAT participation by students who were not as well prepared contributed to a decrease in the MCPS SAT mean score. This is an area of intense strategic focus this year because we
have concluded, as we have discussed with you before, that students must take and succeed in high level courses to do well on the SAT and the ACT. We will continue to monitor and support students in these courses. If we are to successfully address the achievement gap, we must prepare more students for higher level courses so they will be better equipped for these tests and for the educational and career pathways to which they lead.

An additional phenomenon we are seeing and the College Board is beginning to study is the retesting strategy employed by some students. We do not know how this is impacting our scores, but I want to bring it to your attention because it appears to be occurring with greater regularity. This test-taking strategy actually may result in lower cumulative scores attributed to a student's record, which, in turn, could impact a school's performance. For example, once a student examines his/her scores in all three performance areas, the student may decide that he/she needs a higher score in one of the three areas. The student may then decide to retake the test in order to better his/her score in that one distinct area while not concentrating on the performance in the other areas. When considering applicants' scores, it is common practice at many colleges to consider the best score achieved on each subtest, so it benefits the student to use this strategy.

However, this "cherry picking" technique could potentially create a problem for the school results because the score that is reported for the student to the district is the last comprehensive score, not necessarily the best comprehensive score. For example, a student could have had a cumulative 2300 with a 600 in math. The student decides to take the test again in an effort to improve the math score to 650 . The student's score on the math portion may increase, but the overall score may decline, for example, to 2100 . The 2100 score is reported to the district as the student's score because that was the last test taken.

We do not precisely know how many students are engaging in this strategy, but many principals report that it is increasing. I have asked OSA and the Office of School Performance to explore this test-taking method further and determine what impact, if any, it may be having on test scores.

This is but one area we will be exploring through our research to better inform us how to improve our students' performance on these tests. While we are not pleased with the decline in scores, we are confident that our educational program is continuing to prepare more and more students for success in college and beyond. We are pleased with the upward trend as demonstrated by the ACT scores. We also continue to see greater participation in Advanced Placement courses and strong performance in this critical area. I believe that we remain on the right track in our quest to create a school system that provides exceptional learning opportunities for students of all backgrounds.

I will continue to keep you informed of new findings.

Note. Results for American Indian students are not reported separately but are included with all students. SAT data are based on the most recent administration for students who graduated in June
2008. SAT mean scores are not reported ( $\mathrm{n} / \mathrm{r}$ ) for subgroups with fewer than five test takers.
${ }^{\text {a }}$ Includes graduates enrolled in special schools and evening school during Grade 12.

Note. SAT and ACT data are based on the most recent administration for students who graduated in June 2008. Results are not reported (n/r) for subgroups with fewer than five test takers.
${ }^{\text {a }}$ Includes graduates enrolled in special schools and evening school during Grade 12.

[^0]:    Note. Results for American Indian students are not reported separately but are included with all students. SAT data are reported for students who graduated in June 2008.
    ${ }^{\text {a }}$ The race/ethnicity and gender of all MCPS-verified students is known. Some test takers did not report gender and/or race/ethnicity to the College Board.

[^1]:    Note. SAT data are based on the most recent administration for students who graduated in June 2008. Results are not reported (n/r) for subgroups with fewer than five test takers.
